Toshiba R410A Digital
Inverter Split systems
Hi-walls
Ceiling suspended
Cassettes

Clarice House is an elegant venue that benefits from indoor climate control all year round

The room controllers are neat and easy to understand

A Toshiba cassette fits neatly in the ceiling of the male changing rooms

Application details

The Clarice House Day Spa building is a beautifully refurbished and substantially extended former hotel in the countryside on the coast side of Colchester, Essex. It is a popular wedding venue and has stylish restaurant and reception facilities. With plenty of shielded roof space available, Split systems were an ideal solution for the client.

TOSHIBA

Leading Innovation >>>

Solution

Ten Toshiba energy-efficient inverter-controlled Split systems have been installed on the roof of the spa extension, with indoor units in appropriate locations such as the bar, pool reception, changing rooms, studios and gym.

The attractive Toshiba hi-wall units, add to the sheer quality of the experience provided to day-visitors.

Most indoor unit types have been used in different areas of the leisure complex. Cassette-style indoor units serve the changing rooms and ceiling-suspended units are powerful enough to provide the cooling or heating for the large gym and other exercise studios.

Using Split systems has provided the flexibility the client wanted. It is easy to close down different areas and services as timetables and customer demand dictates.
